

SCHNIEDER ELECTRIC

Phillip Dowsett, Deputy Industry Advocate and Felicity Edwards, Engagement Coordinator, toured Schneider Electric's Adelaide warehouse and found it was always an incredible experience, and they were amazed at the technological.

As a leader in energy management and automation, Schneider Electric's facility was nothing short of impressive. During the tour, they saw first-hand how Schneider Electric's products and solutions are manufactured.

Phillip and Felicity witnessed the latest technology in action and learned about the innovative processes that allow Schneider Electric to remain a top player in the industry.

It is inspiring to see the company's commitment to sustainability and their efforts to reduce their environmental impact. From using renewable energy sources to implementing energy-efficient lighting and HVAC systems, Schneider Electric is leading the way in creating a more sustainable future.

INDUSTRIAL DECONTAMINATION SERVICES

Total Apparel Management Programs for laundering and decontaminating firefighter's personal protective clothing/equipment (PPC/PPE) is not a new concept, however after Phillip Dowsett's visit to the Industrial Decontamination Services facility at Wingfield it demonstrates the technological advancements and innovations that are continually being driven by IDS (incumbent contractor to both the SA Metropolitan Fire Service and SA Country Fire Service).

The IDS programs improve firefighter safety by ensuring that PPC/PPE is laundered, decontaminated, repaired and inspected to be fit-for-purpose so that it will deliver optimal protection and performance.

ASTEC PAINTS

Astec Paints has been manufacturing various paints for over 40 years, and supplies globally with key markets in Japan, China and Australia.

Their coatings incorporate world-leading technology and are the only products in Australia that are CodeMark and GECA certified.

Astec's hero product, the Energy Star Heat Reflective coatings display exceptional heat mitigation technology to assist in the reduction of surface temperatures of buildings and structures. These coatings have been extensively used in a range of industries, including domestic housing, education facilities, pharmaceutical and laboratory industry, wine, food, and mining industry.

A big thank you to Peter Galanis and the team at Astec Paints. We see first-hand their commitment to producing high-quality and innovative products right here in South Australia

CREATIVE SYSTEMS

Creative Systems is a South Australian based commercial office furniture company, specialising in design, selection, and manufacturing, offering furniture and acoustic solutions for government, interior architecture/design, and commercial enterprise.

They manufacture, supply, and install commercial furniture utilising a range of SA based manufacturers and subcontractors. As a result, they have control over their production lead times and hold 'off-the-shelf' core products in their workshop reducing delivery time frames and can supply some product in as little as 48 hours.

Some of their current clients include but are not limited to: SAPOL, DHS, SA Health, PMB Defence, Consunet and Colliers.
